Assignment 3: Object Detection Results

Objective. Run object detection on two images and report the class information, confidence, bounding-box coordinates, width, height, area, and centre point.

Implementation. `your-detection.py` loads the Lecture 4 fruit SSD model on the Jetson, detects objects, prints all requested measurements, and draws Type, confidence, L, T, W, H, and Area on the saved output images.

Run command (on Jetson):

```
python3 your-detection.py fruit_2.jpg fruit_5.jpg --model=ssd-mobilenet.onnx --labels=labels.txt
--output-dir=assignment3_results --threshold=0.30
```

Image	Detected class	Confidence	Bounding-box measurements (pixels)
fruit_2.jpg	Strawberry (3 boxes)	31.0%, 48.1%, 40.1%	Full values are printed by the program and drawn on the image.
fruit_5.jpg	Apple; Banana	35.3%; 30.7%	Full values are printed by the program and drawn on the image.

Annotated Detection Images

Figure 1. Strawberry detections. Each label contains Type, confidence, L, T, W, H, and Area.

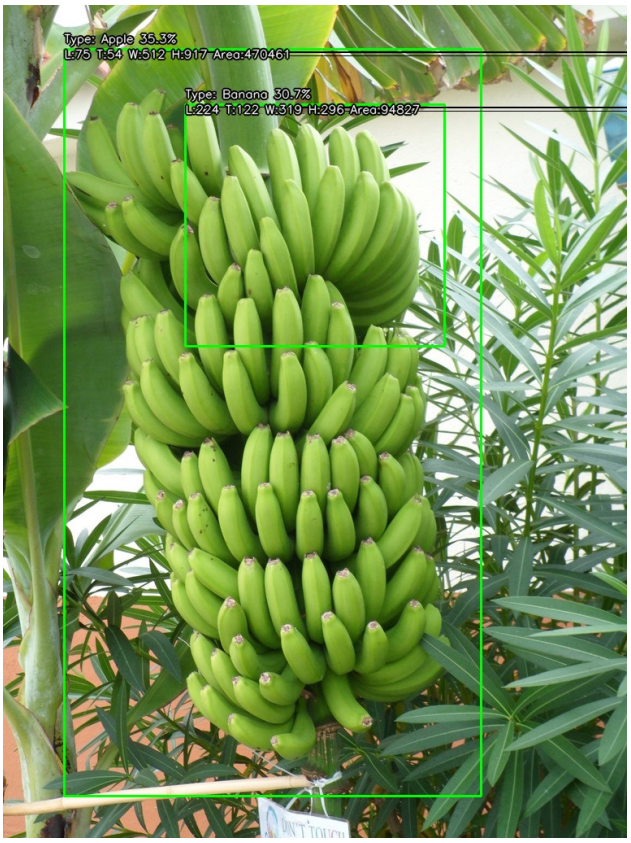

Figure 2. Banana-scene detections. The Apple box is retained as the model output; it demonstrates that the report records actual inference rather than edited labels.
